Nutrition and Immune System Software

To run the software, please check the requirement.txt file. First you need have at least python 3.7 installed in your system. It is always recommended to use a virtual environment for project interpreter though it is not must.

Then user can either manually install all the libraries from requirement.txt folder by typing following command:

Pip install *****

E.g.: pip install dash

Or user can just go to the project directory from the IDE (e.g. Pycharm) and type following command:

Pip install -r requirement.txt

It will a take some of time to install all the libraries.

Then user can just run the app.py file to run the software. As we worked on Dash, it provides us with a server link. Clicking on the link, a window will open on user's default browser with the software.

We have also uploaded the software in server for public use. Please visit: https://data-science-group3.herokuapp.com/ to run through the software without running it in your own system.

Enjoy! :D
